

References and Notes

General Style

- List initials first (separated by a space) for up to five author names in a citation, separated by commas. For more than five, use the name of the first author only followed by *et al.*
- Journal names are italic. They are abbreviated (with periods after each abbreviated word); one-word titles are spelled out in full and are not followed by a period.
- Volume number after journal name is in boldface, followed by a comma and the first page of a citation.
- Year of publication is in parentheses (within parentheses after publisher and city for books).
- Do not place a comma before the volume number or before any parentheses.
- Use periods after listings except after e-mail addresses in the author affiliations.
- Because we do MEDLINE and CrossRef checking, we use PubMed journal title abbreviations rather than ISO abbreviations if there is a conflict. We spell out city names.
- We do not allow unpublished references (e.g., personal communication, submitted manuscripts). If there is an in-press reference, query the author and editor for the reference availability at publication date.

Basic Examples

Periodicals

1. J. C. Smith, M. Field, *Proc. Natl. Acad. Sci. U.S.A.* **51**, 930 (1964).
2. P. W. Ewald, *Sci. Am.* **268**, 86 (April 1993).

Books

4. M. Lister, in *Fundamentals of Operating Systems* (Springer, ed. 3, 1984), pp. 7–11.
5. D. Curtis *et al.*, in *Clinical Neurology of Development*, B. Walters, Ed. (Oxford Univ. Press, 1983), pp. 60–73. [chapter in a book]

Conferences and meetings

6. *Proceedings of the Sustainable Food Security for All by 2020 Conference*, Bonn, Germany, 4 to 6 September 2001 (International Food Policy Research Institute, 2002).
7. M. Konishi, paper presented at the 14th Annual Meeting of the Society for Neuroscience, Anaheim, CA, 10 October 1984.

Nonscientific magazines and newspapers

8. "New anticancer method to be altered," *Washington Post*, 12 June 1986, p. A4.
9. M. Marriott, *New York Times*, 7 November 1988, p. B81.

Theses

10. R. White, "Title (optional)," thesis, University of Illinois, Chicago, IL (1983).
[10/2015]

Internet publishing

[When published in *Science* First Release but not yet in print:]

11. A. M. Lindroth *et al.*, *Science* 10.1126/science.1059745 (2001).

[When published in *Science* First Release and in print:]

11. A. M. Lindroth *et al.*, *Science* **292**, 2077 (2001).

12. F. Gaits, K. Hahn, *Sci. STKE* **2003**, pe1 (2003).

[for STKE mss.—changed to *Science Signaling* in 2008]

13. E. M. Pietras, G. Cheng, *Sci. Signal.* **1**, pe 36 (2008).

[for *Science Signaling* mss.—was STKE until 2008]

14. R. K. Aziz, V. Nizet, Pathogen microevolution in high resolution. *Sci. Transl. Med.* **2**, 16ps4 (2010).

[for *Science Translational Medicine*]

15. A. Clauset, S. Arbesman, D. B. Larremore, Systematic inequality and hierarchy in faculty hiring networks. *Sci. Adv.* **1**, e1400005 (2015).

General Notes (Based on Instructions to Authors)

- In text, citations for references and notes are on the line, within parentheses, numbers italicized as, for example *(18, 19)* *(18–20)* *(18, 20–22)*. Citations are numbered sequentially, in this order: (i) main text, (ii) text boxes, (iii) figure and table captions, (iv) reference notes and acknowledgments (main-paper notes, then acknowledgments, then SM-only notes), and (v) SM.
- The last note contains the acknowledgments and is not cited in the text. For block quotations, we use a page number, as, for example, [(13), p. 96].
- Each reference can be listed only once, separate from other references and from any text notes. (This facilitates reference checking and online linking.) Separate and renumber if necessary. Notes can cite other references (by number).
- Data supporting the results or conclusions should be included in the paper or supplementary materials (SM) or must be archived in an appropriate database at the time of publication and made available for reviewers. Do not include results or conclusions supported by data that are not shown or are in press.
- Any references to data not shown should be brought to the attention of the author and editor before being removed in case information should be added to the SM.
- Notes should be used for information aimed at the specialist (e.g., procedures) or to provide definitions or further information to the general reader that are not essential to the data or arguments.
- Authors are asked not to put tables within notes. (If equations are too large for the reference format, discuss with editor and author.)
- Authors are asked not to use automatic cross-referencing functions to link citations and references.

Instructions for Copy Editors and Proofreaders

In text, citations precede punctuation.

References should be as short as possible while providing all necessary information for locating the work.

Order of references is first in the text, then through text boxes, then figure and table captions, then reference notes and acknowledgments, and then SM-only references.

The accuracy of reference citations is the authors' responsibility. However, all *Science* references should be checked. If eXtyle flags problems, the copy editor may check them or modify the queries for the author.

Renumbering

Authors are asked not to use automatic cross-referencing functions to link citations and references. If they do, citations and references must be unlinked by selecting all text and references, then by using CTRL + 6 or other commands to unlink. If numbers are removed by doing this (which rarely happens), the references must be renumbered.

Unpublished work and permissions

Science does not allow citations of “in preparation,” “submitted,” “unpublished data,” “data not shown,” or “in press.”

Problem entries noted by eXtyle

If eXtyle flags problem entries, MEDLINE and other reference sources are sparse or nonexistent before 1994, and queries to check date of publication can be ignored.

Book references that are confusing or lack the city of publication may be checked via the Web (www.google.com, www.vivissimo.com) at www.ncbi.nlm.nih.gov/entrez under Books, the Library of Congress (www.loc.gov), Amazon.com, in university libraries, and other places.

If eXtyle does not recognize a journal name, sources in our offices include the following:

Hard copy: *Serial Sources for the BIOSIS Data Base (BIOSIS)*; *The ACS Style Guide: A Manual for Authors and Editors* (American Chemical Society); *The ASM Style Manual* (American Society for Microbiology); and *Scientific Style and Format: The CBE Manual for Authors, Editors, and Publishers* (Council of Science Editors).

Online and/or searchable: From *Science* "Instructions to Authors" online, www.sciencemag.org/feature/contribinfo/prep/res/journal_abbrevs.shtml, which lists journal abbreviations with a sprinkling of notes. From MEDLINE; (www.ncbi.nlm.nih.gov/entrez/), select Journals in pull-down at left and type part of the journal name, then you can use single citation under Links to search by author or volume and page. From the folks who prepare *Current Contents* and the Citation Indexes, ISI Journal Abbreviations Index (alphabetical); Impact factors for ISSN (<http://www.scijournal.org/search/search.php?query=Open+Biol.+&search=1&x=5&y=3>); another source (<http://library.caltech.edu/reference/abbreviations/>); journals list (in Department\Copied\Journals.doc); www.publist.com; and other Internet resources. In www.PubList.com, a word from the journal name gives all indexed periodicals with that word in the title, but alphabetization is nonstandard. For the American Physical Society journal archives, use PROLA (<http://prola.aps.org>).

Preferred journal names

For journals in MEDLINE [the NLM (National Library of Medicine) standard abbreviations], use MEDLINE abbreviations to facilitate online linking with eXtyle, but then change them to match the entries below. For non-MEDLINE journals, we prefer journal name abbreviations of the ISO (International Standards Organization) found in BIOSIS, ACS, and ASM style guides mentioned above.

Journals change their names and new ones arise. Older references may have different journal names from those used now. See BIOSIS.

The journals of the Chemical Society (London) have some parts with and some without volume numbers

J. Chem. Soc. Chem. Commun. (include volume number as year)

J. Chem. Soc. Dalton Trans. (include volume number as year)

J. Chem. Soc. Perkin Trans. 1, *J. Chem. Soc. Perkin Trans. 2*

J. Chem. Soc. Faraday Trans. 1, *J. Chem. Soc. Faraday Trans. 2*

Cities (spelled out) are sometimes added after a journal name to distinguish journals having the same name.

Structure (London)

MEDLINE Abbr: *Structure*

Structure (Cambridge, Mass.) ISO Abbr: *Structure*
MEDLINE Abbr: *Structure* (Camb)
ISO Abbr: *Structure* (Camb.)

[Please use *Structure* and *Structure* (Cambridge).]

Science preferred journal names:

Acta Crystallogr. A
Acta Crystallogr. B
Acta Crystallogr. C
Acta Crystallogr. D
Acta Crystallogr. E
Bioessays
Pflugers Arch. [to match MEDLINE, from *Science* Instructions for Authors]
Philos. Trans. R. Soc. London Ser. A
Philos. Trans. R. Soc. London Ser. B
Proc. R. Soc. London Ser. A
Proc. R. Soc. London Ser. B

Spelling

U.S. versus British English. We retain British spellings (Colour, Centre, etc.) in journal names and book titles if the reference was published in the UK or the British Commonwealth.

As supplied by the author, author names should have appropriate accents, and the copyeditor should make sure they are cited consistently in a reference list. If you suspect an accent is needed, this may require searching with * in placed of the accented letter in a truncated name, as Alabad* for Alabadí (in *Science* search). Author names may have digraphs for initials: Ya. A. Perlman (Russian transliterated).

Do not include special capitalization, accents, or diacritical marks in journal names.

Abbreviations

General. We use Ed. and Eds. for editors, ed. for edition, no. for issue or other number if there could be confusion without the number, chap. for chapter, Univ. for University (publisher), vol. for volume, and suppl. for supplement but capped and italic if it is part of the journal name. For pages in newspapers, if available: p. A21 (abbreviate page and note section); in books or reports: p. 21, pp. 21–25, or 15 pp. (having 15 pages).

Abbreviate publisher and organization names, then use the abbreviations.

We drop “US” before Government Printing Office. We add US before some government agencies, as US Department of Energy, thereafter (DOE).

Author names

For author name abbreviations and hyphenation, follow the author.

Most Chinese names have a one-syllable family name and a two-syllable given name, abbreviated as, for example, J.-T. Yang; MEDLINE will usually list it as Yang JT. When the second part is lowercase or the two syllables are combined, as YuChiao Chang, MEDLINE will list it as Chang Y.

Science style: No punctuation before Jr., 3rd, or III after an author's name.

Style and Format for Entries

For journal articles, list initials first for all authors, separated by a space. Do not use "and" between author names. Journal articles with more than five authors will have the author list truncated with *et al.* (italics) for print versions.

Journal titles are in italics. Each abbreviated word is followed by a period, but whole words are not followed by a period, e.g., *Cell* for *Cell* but use *Cell.* for *Cellular*.

Volume numbers follow, in boldface. Do not place a comma before the volume number or before any parentheses. Give only the first page number of the article. Years are in parentheses: (1996). End each listing with a period.

A. B. Smith, B. C. Hobbs, *Journal Name Abbrev.* **XX**, XXX (2005).

For whole books, monographs, memoranda, or reports, the style for author and editor names is as above. Italicize the book title and capitalize important words. After the title, provide (in parentheses) the publisher name, (as of October 2015, we will no longer provide the publisher location, unless the publisher is very obscure), edition number (if any), and year of publication. If these are unavailable, or if the work is unpublished, please provide all information needed for a reader to locate the work; this may include a URL or a Web or FTP address. Do not give the total page count.

A. Author, *Book Title* (Publisher, Year).

F. Lastname1, F. Lastname2, F. Lastname3, Eds., *Book Title* (Publisher, Year).

For chapters in edited books, the style is as above, except that "in" appears before the book title, and the names of the editors appear after the title. The chapter title should appear within quotation marks in sentence case and roman font, and there should not be a comma after the chapter title and before the word "in". After the information in parentheses, provide the complete page number range (or chapter number) of the cited material. Inclusive page numbers (or chapter number) must be given when specific articles are referred to within an edited volume.

A. Author, "Chapter title" in *Book Title*, F. Lastname1, F. Lastname2, F. Lastname3, Eds. (Publisher, City, State, Year), pp. XX–XX.

For unpublished material, such as letters, provide information about the author (and recipient) and how to locate it (see examples). For unpublished proceedings or symposia, supply the title of meeting, location, inclusive dates, and sponsoring organization.

For research first published on the Internet, in *Science* First Release, another Internet accelerated publication, or physical sciences preprints available on the Internet, give the URL (see the examples below). These are considered published and the DOI or URL should be provided. Preprint citation style updated as of March 2017 (see examples below).

Acknowledgments should be in a brief statement at the end of the references and notes and edited to conform to *Science* style (delete superlatives). These notes appear with the introduction "Acknowledgments:" at the beginning of the paragraph. There are four standard subheadings in the acknowledgment (Funding, Author contributions, Competing interests, and Data and materials availability).

Style Examples and Specifics for Journals, Periodicals, other Serial Publications

Basic format

One author	N. Tang, <i>Atmos. Environ.</i> 14 , 819 (1980).
Two authors	J. C. Smith, M. Field, <i>Proc. Natl. Acad. Sci. U.S.A.</i> 51 , 930 (1964).
Up to five authors	J. C. Cheeseborough III, S. Trajmar, J.-T. Yang, <i>EMBO J.</i> DOI (Year).
More than five authors	K. Jacobs <i>et al.</i> , <i>Nature</i> 313 , 806 (1985).

Special cases for journals

Volume and issue

1. When there is no volume number, use boldface year for volume or issue number.

No volume number, use boldface year: *Am. Lab.* [Greens Farms, CT], *Cardiac Res.*, *Chem. Commun.*, *Chem. Ind.*, *Ind. Res.*, *Mikrochim. Acta*, *Prog. Chem. Soc.*, *Res. Dev.*, *Tetrahedron Lett.* [before vol. 21 in 1980]

Citation example J. Richards, *Chem. Commun.* **1985**, 741 (1985).

No volume number, but numbered by issue, e.g., *Am. Mus. Novit.*

2. Volume and page insufficient: Journals that begin every issue with page 1, include the date (or season) of the issue with the year **or** the issue number inside parentheses after the volume.

Add issue identification for *Bull. At. Sci.*, *Chem. Eng. News*, *Environment*, *Phys. Today*, *Sci. Am.*, *Am. Sci. (Am. Scientist)*, and *Spectrum*.

Citation examples P. W. Ewald, *Sci. Am.* **268**, 86 (April 1993).
B. M. Schechter, *Phys. Today* **39** (6), 58 (1986).
D. J. Baker, *Oceanus* **29**, 41 (spring 1986).

3. Volume numbering changes. Volumes per year may increase or change.

Example *Lancet* used to have two volumes every year, i and ii; however, in 1990 they began with volume 335. Now, all back issues have volumes on their Web site. Use the volume number.

4. Special issues of a journal may be cited in their entirety or with inclusive pages.

High Technol. **5** (11), 35 (1985).

Special issue on Pioneer 10 Encounter with Jupiter, *Science* **183**, 301–324 (25 January 1974).

Women in Science '93, *Science* **260**, 383–430 (1993).

5. Books and monographs in series may be treated as journals.

Books in series treated as journals:

AGU Monogr. Ciba Found. Symp., *Cold Spring Harbor Symp.*, *Annu. Rev. of whatever*, *Ann. N.Y. Acad. Sci.*

omit publisher, editor, and title of work (e.g., book title for *Ann. N.Y. Acad.*).

Supplements. Supplements may be regular publications (in which case they are treated as part of the journal name), or they may be irregular additions.

J. McCarthy, *Acta Med. Scand. Suppl.* **4**, 185 (1960).

J. M. Dinning, *Am. J. Clin. Nutr.* **42** (suppl. 1), 12 (1984).

Letter designations. Some journals have letters associated with the name, volume number, or page numbers. The *American Journal of Physiology* is divided into sections, and a letter precedes the page number: C, E, F, G, H, or R. Supplemental pages often are preceded by S.

Acta Crystallogr. has lettered sections that are part of the journal abbreviation, not the volume: e.g., *Acta Crystallogr. D*

Style Examples and Specifics for Books

Basic format

Book with author or Ed. E. Acock, D. Michie, Eds. in *Machine Intelligence* (Wiley, 1976), chap. 3.

Organization as author and publisher National Academy of Sciences, *Principles and Procedures for Evaluating the Toxicity of Household Substances* (National Academy of Sciences, 1977).
[Often these are from the National Research Council (as author).]

Edition noted M. Lister, in *Fundamentals of Operating Systems* (Springer, ed. 3, 1984), pp. 7–11.

Chapter of a book D. Curtis *et al.*, in *Clinical Neurology of Development*, B. Walters, Ed. (Oxford Univ. Press, 1983), pp. 60–73.

Book with subtitle R. L. DuPont, *The Selfish Brain: Learning from Addiction* (Hazelden, Center City, MN, 1997).

Titles of books in the English language have each important word capitalized; exceptions are articles and short conjunctions and prepositions (four letters or less). Set titles in italic type without quotes. For foreign-language book titles, follow *Chicago Manual of Style*.

Publisher's names and city. Book publisher's names are given in shortened form, such as Wiley, Wiley-Interscience, Springer, Norton, and Saunders.

“Press” and “Verlag” (German for press or publisher) and the like are usually dropped, except Academic Press [“Academic” is an adjective], University Park Press, Baltimore; and CRC Press.

For university presses, MIT Press, and Cambridge Univ. Press [to distinguish them from the university itself as publisher].

Government agencies and associations are spelled out as publishers, then abbreviated if used again in the reference list.

Unless the publisher is very obscure, it is no longer necessary to include the city of publication (as of Oct 2015).

Special cases for books

Books in series with series titles. Mostly treat the same as multivolume works below. Supply series information, if available, before the publisher-year parentheses. Mention volume number in the series if applicable.

J. Sprung, *Corals: A Quick Reference Guide*, Oceanographic Series (Ricordea, 1999).

J. H. Steward, Ed., *Handbook of South American Indians*, bulletin 143, Bureau of American Ethnology (Smithsonian Institution, 1949). [This series is not listed in a standard source.]

Multivolume works. In citations of individual volumes, the editor's name follows that part for which he or she is responsible.

G. Herzberg, *Infrared and Polyatomic Molecules*, vol. 2 of *Molecular Spectra and Molecular Structure* (Van Nostrand, 1945), chap. 2. [each volume has specific title, series title follows]

R. A. Murphy, in *Handbook of Physiology*, Section 2, *The Cardiovascular System*, vol. 2, *Vascular Smooth Muscle*, D. F. Bohr, A. P. Somlyo, H. V. Sparks, Eds. (American Physiological Society, 1990), pp. 5–25. [each volume has different editors]

Reports and Technical Reports

In titles of reports that are not books, first and important words capped, also those after a colon, within quotation marks. Often seen in Policy Forums. Some U. S. Government publications available from the database at the National Technical Information Service (NTIS) have TID numbers [see (4) below].

1. G. B. Shaw, "Practical uses of litmus paper in Möbius strips" (Tech. Rep. CUCS-29-82, Columbia Univ., 1982).
2. "Evaluation of certain mycotoxins in food," *WHO Tech. Rep. Ser.* (no. 906) (2002). [journal is a listed serial publication]
3. U.S. Environmental Protection Agency (EPA), "White Paper on Bt plant-pesticide resistance management" (Publication 739-S-98-001, EPA, 1998); www.epa.gov/pesticides/biopesticides/white_bt.pdf.
4. J. Thomas, in *Title*, J. Blondall, Ed. (TID 26608, National Technical Information Service, 1976), p. 127.
5. Author, "Title of the piece," Working paper, Organization, Place, Date.

Newspapers

English-language daily newspapers published in the United States italicize the city as part of the title (*Washington Post*, *Los Angeles Times*, except *Wall Street Journal*, *Christian Science Monitor*, *National Intelligencer*). If the city is not widely known, the state is included (roman): *Oneida* (NY) *Observer*.

Foreign dailies: *Times* (London), *L'Aurore* (Paris), *Le Monde*, *Manchester Guardian*. If there is no byline, give the headline, state, newspaper, date, and page no. (with section). *The Chicago Manual of Style* asks for the section, but notes that the page can change with the edition (morning, Metro, etc.), so they do not ask for the page.

"New anticancer method to be altered," *Washington Post*, 12 June 1986, p. A4.

“Tumor-fighting cells found,” *New York Times*, 12 September 1986, p. A25.
M. Marriott, *New York Times*, 7 November 1988, p. B81.

Theses and Unpublished Material

For a thesis, name the school but not the degree; we do not use “dissertation,” “Ph.D.,” “Master’s,” or other specifics. Name the city if the university could be mistaken for another. Manuscripts that are not accepted for publication may not be listed as “in press” or “submitted.” Dates should be provided for printed works.

- B. Smith, thesis, Georgetown University (1973).
R. White, “[Thesis title goes here (optional)],” thesis, University of Illinois, Chicago, IL (1983).
N. Bohr, memorandum to M. Planck, 3 January 1952.
New York City Department of Health, press release (19 November 1991).

Meetings, Conferences, and Proceedings

Include the city and dates of the meeting (ask author or find on the Web). The first example below is published (publisher and date of publication included). The sponsoring organization should be mentioned if it is not part of the meeting name [see (5) below]. Abstracts can be cited in *Science*; use abstract no. or page, as supplied by the author.

1. *Proceedings of the Sustainable Food Security for All by 2020 Conference*, Bonn, Germany, 4 to 6 September 2001 (International Food Policy Research Institute, 2002); www.ifpri.org/2020conference.
2. *Proc. Lunar Sci. Conf.* **11**, 1 (1970).
3. “Evaluation of the carcinogenic hazards of food additives,” *FAO Nutr. Meeting Rep. Ser. No. 29* (1981).
4. United Nations Conference on New and Renewable Sources of Energy, Nairobi, Kenya, 10 to 12 August 1981 (A/CONF. 100/C.2/L.1/Add.1; draft, English version), pp. 11–12.
5. M. Konishi, paper presented at the 14th Annual Meeting of the Society for Neuroscience, Anaheim, CA, 10 October 1984.
6. Centers for Disease Control and Prevention and the Council of State and Territorial Epidemiologists, Atlanta, GA, 4 and 5 March 1999, minutes, p. 22.

Internet Publishing

Use the DOI for electronic publications, without “DOI” in the URL

If now published in print, omit the URL and provide only a standard reference (for journals other than *Science*).

If a URL is no longer available and cannot be replaced with another, use [accessed (date)]. We try to have all links live at publication.

Add information from the title page that you reach with the URL to clarify what the source is, especially because the URL could change. Add dates if available.

Public documents, legislation and court cases

For patents, name, number, and date, e.g., L. O. Norman, U.S. Patent 4,379,752 (1983).

For laws and regulations, reference "The Blue Book" in BPO's and Joi's offices and www.loc.gov; note that we spell out some abbreviations for foreign readers, but leave Pub. L. No., which refers to Public Law number. If there is a commonly used name of the rule or regulation, its name should be given, as EPA Effluent Limitations Guidelines, followed by title, the section or page of the Code of Federal Regulations (C.F.R.), and the year. *Federal Register* publishes rules and regulations before they are entered into C.F.R. Give date with Federal Register.

1. Personal Responsibility and Work Opportunity and Reconciliation Act of 1996, The Welfare Reform Act, Pub. L. No. 104-93, 110 Stat. 2105 (1996).
2. *Fed. Regist.* **56**, 1628 (18 June 1999) [to be codified at 45 Code of Federal Regulations (C.F.R.) § 46].
3. 45 C.F.R. 46.116 (a) (5). [after C.F.R. has been defined in the citation list]

For court cases, we do not italicize v. for versus, but we follow the Blue Book for abbreviations.

4. *Englert v. Tenenbaum*, 580 F. Supp. 1407, 1412 (D. Mass. 1985).

5. *British Horseracing Bd. Ltd. v. William Hill Org. Ltd.* (Chancery Div. 2000; www.courtservice.gov.uk/judgments/).

Citation for a poster

B. R. Jasny, O. M. Smith, Eds., poster from the special issue on The Mosquito Genome, *Anopheles gambiae*, *Science* **298**, following p. 98 (4 October 2002); published online 3 October 2002; www.sciencemag.org/feature/data/mosquito/index.shtml#poster.

G. Hutvagner, M. Simard, Eds., poster from the special issue on RNA, *Science* **309**, following p. XXX (2 September 2005); published online 1 September 2005; www.sciencemag.org/sciext/rna.

Data citations

Data supporting the results or conclusions should be included in the main paper or supplementary materials (SM) or must be archived in an appropriate database at the time of publication.

Format: “Author(s), Dataset Title, Version (if applicable), Name of Data Repository or Archive (Year); DOI.”

Example:

D. Klein, Replication Data for: Probing magnetism in 2D van der Waals crystalline insulators via electron tunneling, version 1, Harvard Dataverse (2018); <https://doi.org/10.7910/DVN/4RUPNW>.

If an author is citing data in the Acknowledgments, the general form should be: “Data are available in/from/at [repository name] (*ref*).” The reference number should be the last one before the supplementary references, unless the dataset has been cited earlier in the paper. At present, we should create a reference for data mentioned in the Acknowledgments **only** when the repository provides a DOI (as opposed to a custom number).
